
1. **Team:**

- i. Ethan Wright
- ii. Julio Lemos
- iii. Petar Nguyen

2. **Title:** CheapChef

3. **Description:**

A web application that allows the user to input common items that a college student has easy access to that will then generate a list of possible cheap meals that could be easily created.

4. **Actors:**

- Customers can select common ingredients from a sorted list on the website
 - Customers select the type of food they would like
 - Customers can select the cost of extra ingredients they do not have to purchase
 - Customers can select the maximum number of ingredients they would like to have to involve in the meal
 - Customers can save and download the recipe that is generated for them
-

5. Stretch Functionality:

- Allow for ingredient list / recipe integration with google keep notes
- Make a version as an app
- Create a user sign-in, use the user information to generate customized recipes based on previous accepted recipes.
